

DHARMA VYAS

Laurel, MD | (301) 542-3485 | dharmavyas128@gmail.com | github.com/dharmavyas128

PROFESSIONAL SUMMARY

Information Systems student at UMBC with hands-on experience building and deploying full-stack web applications, including a real-time app with a PostgreSQL backend and live data features. Combines technical project experience with strong customer-facing and data-reporting skills developed through retail and volunteer work. Seeking an internship to apply skills in systems development, data management, and problem-solving.

EDUCATION

University of Maryland, Baltimore County (UMBC) *Baltimore, MD*

Bachelor of Science, Information Systems | GPA: 3.0 Expected Graduation: 2028

SKILLS

- Languages: Python, Java
- Tools & Platforms: Git/GitHub, Supabase, Excel, Google Forms

EXPERIENCE

Retail Sales Associate, UPS *Laurel, MD*

March 2025 – Present

- Assist 50+ customers daily with shipping, packaging, and printing needs while ensuring an efficient, positive experience
- Recommend shipping options and value-added services tailored to individual customer needs
- Educate customers on self-service technology (online shipping tools, tracking systems, in-store kiosks)
- Manage transactions and resolve customer issues with professionalism in a fast-paced environment

Data & Operations Volunteer, ISSO Swaminarayan Mandir MDDC *Laurel, MD*

2023 – Present

- Manage donation records and event signup data for a community organization using Excel and Google Forms, maintaining accuracy across recurring events
- Organize and analyze data to produce regular reports for leadership, tracking trends and participation over time
- Advise organizational leadership on process improvements based on data findings, supporting decision-making

PROJECTS

Street Stumps — Cricket Scoring Web App *Personal Project*

React, Vite, Tailwind CSS, Supabase (PostgreSQL, Auth, Realtime)

- Built and deployed a mobile-first cricket scoring app solving the lack of tools for casual cricket games, where scoring is typically tracked on paper
- Designed a pure-reducer state engine to manage scoring logic and rules without mutating state, with a snapshot-based history stack enabling unlimited undo
- Built a PostgreSQL backend with Row-Level Security and 6+ custom SQL (PL/pgSQL) functions to support a fantasy-style points system and live ball-by-ball scoring
- Implemented real-time multiplayer using Supabase Realtime so friends can watch live games update ball-by-ball
- Developed full authentication (email/password, Google OAuth, guest mode) and a social friendships system
